Preparation of standard curve

Prepare within 30 minutes of use.

1. Reconstitution

Reconstitute the lyophilized standards to create the Standard stocks by adding 0.25 ml of Assay diluent: EYRAplex to one vial of Standard mix A: EYRAplex, human.

Allow the standard to dissolve for 5 minutes at room temperature, then mix thoroughly (e.g., by vortexing or pipetting up and down) before proceeding to step 2.

2. Preparation of standard curve

Dilute the reconstituted standard to prepare a seven-point standard curve (S1–S7) as shown below. Change pipette tip between each dilution step. The volumes prepared for each standard point are sufficient for duplicate wells. Optionally, use a different dilution factor to generate a longer titration range.

Prepare an additional tube containing only Assay diluent: EYRAplex (no standard), which will serve as the assay background control (blank).
